

Dunkermotoren, MAE, and EGS Automation publish sixth edition of “mo

For the sixth time, Dunkermotoren, a brand of AMETEK has published a new issue of the drive technology magazine “mo. Just like the previous editions, the magazine once again covers exciting topics around latest drive technology trends and provides interesting insights into the companies Dunkermotoren, MAE, and EGS Automation. The magazine introduces the new Application engineering department at Dunkermotoren, acting as a technical interface to support the sales team and customer on new projects. They will assist with the configuration of a perfect drive solution right from the beginning.

This year's issue pays special attention to the subsidiary EGS Automation in Donaueschingen. In addition to an interview with the founder Robert Eby, a detailed application example provides information about the countless automation possibilities of EGS solutions. Illustrated with numerous pictures, the article shows how the automotive supplier KE Elektronik achieves an annual output of several million connectors completely autonomously – thanks to two injection molding machines and six robots built by EGS Automation.

Another focus in the sixth “mo issue was set on Industry 4.0. After the launch of nexofox in October 2021, the IIoT brand is now presenting its own service catalog. In addition to training courses on motor configuration and programming as well as individual service contracts for commissioning and fault analysis of smart motor solutions, nexofox will also be happy to advise you on your questions about predictive maintenance or provide you with the technology needed for real-time analyses as part of condition monitoring.

The Dunkermotoren sister company MAE is represented in “mo for the third time and presents a new high-speed AC motor as well as a completely new blower series with particularly low power consumption and compact design, making it a perfect fit for battery-powered wet and dry cleaning machines.
