MAE and Dunkermotoren exhibit together for the first time at the Interclean in Amsterdam

MAE, known as a long-standing manufacturer of blowers and motors in the field industrial and private cleaning applications, is exhibiting together with its sister company Dunkermotoren at Interclean in Amsterdam for the first time this year. Both companies will jointly present their new products in hall 5 at booth 505.

MAE's blowers have been used for many years for the suction function of scrubber-driers. The blowers offer excellent air performance, quiet operation, high speeds and a good power, size and weight ratio - all with the best-in-class energy efficiency system according to the new Ecodesign Directive.

Dunkermotoren's know-how in the field of automated guided vehicles (AGVs/AGCs) is applied to the autonomous/ride-on cleaning machines.

With the drive combination consisting of the brushless and smart DC motor BG 95 ***dPro*** and the hub gear NG 500, or the BG 75 ***dPro*** with NG 250, Dunkermotoren offers the perfect solution for cleaning robots. The drive solutions from the drive technology manufacturer operate quietly, reliably and maintenance-free. In addition, the motors have a high power density, cover a wide voltage range and are therefore ideally suited for battery-powered applications.

The modular system from Dunkermotoren and MAE offers a wide range of options for configuring economical and customized drive solutions that meet the high requirements for mobile applications. Reliable, robust and efficient – completely made in Europe - offers an enormous advantage in times of complex supply chains.
