PRESS RELEASE

of Dunkermotoren GmbH in September 2023

Focus: Sustainability – new focus of the Dunkermotoren customer magazine

A new issue of the Dunkermotoren motion journal “mo sets its focus on what really counts: our environment.

For the seventh issue of its customer magazine "mo, Dunkermotoren, a brand of AMETEK, has come up with something special. Presented in a new format, the drive technology manufacturer gives readers a look behind the scenes and explains how the topic of sustainability is implemented through the company.

At Dunkermotoren, it's not just the motors that are trimmed for efficiency, but the entire product creation process. "Sustainability is of central importance to us. Every day, we at Dunkermotoren work in many ways to reduce our carbon footprint and make a growing contribution to environmental protection - as a company and as individuals," says Uwe Lorenz, Managing Director of the Dunkermotoren Group.

With the new customer magazine, the company grants details on how it realizes the idea of sustainability across all areas of the Dunkermotoren Group.

Either through energy recovery of the Yaskawa robots used by EGS Automation, resource-saving motor operation thanks to smart nexofox services, or with short supply chains in motor production at Dunkermotoren and MAE. Every member of the group makes their contribution to more sustainability in everyday processes. And the employees themselves are also becoming active - in the truest sense of the word.
